(54) Title: FRYING HOB ARRANGEMENT

(57) Abstract: Frying hob arrangement comprising a planar heating means (5) including a ferromagnetic material and constituting a frying surface. The arrangement comprises at least two magnetic field generators (1, 2) each having two free ends, wherein said heating means is arranged in or close to a plane defined by said free ends. The magnetic field generators are controlled by a control means such that they are adapted to generate alternating magnetic fields in said planar heating means, wherein the magnetic fields are converted into heat in said heating means. The magnetic fields being such that the magnetic field through one of said free ends has an opposed direction as compared to themagnetic fields through the other free ends.
